(57) Abstract:

PROBLEM TO BE SOLVED: To provide an air purifier capable of effectively, safely and regularly utilizing secondarily generated ozone.

SOLUTION: This air purifier is provided with an air fan 3 provided in an air passage 2, a dust collecting filter 1 provided at the suction side of the air fan 3, an electric discharge element 4 provided in the exhaust side of the duct collector 1, a dust collecting part 5 for electrically collecting dust or the like charged by the discharge element 4, an ultraviolet lamp 6 carrying a photodecomposition catalyst for decomposing ozone generated from the discharge element 4 and malodorous components in air and an ozone sensor 7 and a control circuit 8 for controlling the concentration of ozone passed through the ultraviolet lamp 6.
